

Aria e-prescribing A11 Guide

Visit Tab

You can see all the patients attending a chemo clinic (select location), or under a specific consultant (Provider), select the date you want to view.

Highlight a patient and select **Open**, or double click on the patient bar to open that patient

Click **Schedule**: To view the patient's chemo appointments

Right click on the patient bar to see demographics, diagnosis, treatment, allergies ⚠️, trial information.

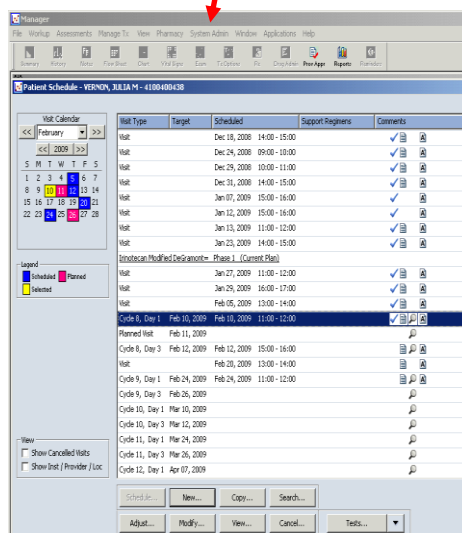

Click on the icons on the patient bar to see notes and visit information **eg** 📅 patients are in, or have been in a trial.

In Aria – prescribing and scheduling are **NOT** initially linked.

Once chemo has been prescribed, the cycle dates appear under “target” but **need to be scheduled** in the chemo or ward diary.

Then the appointments appear under “scheduled”.

If the patient is deferred this must be changed by the scheduler.
