

Aria e-prescribing guide

Cumulative dose checking

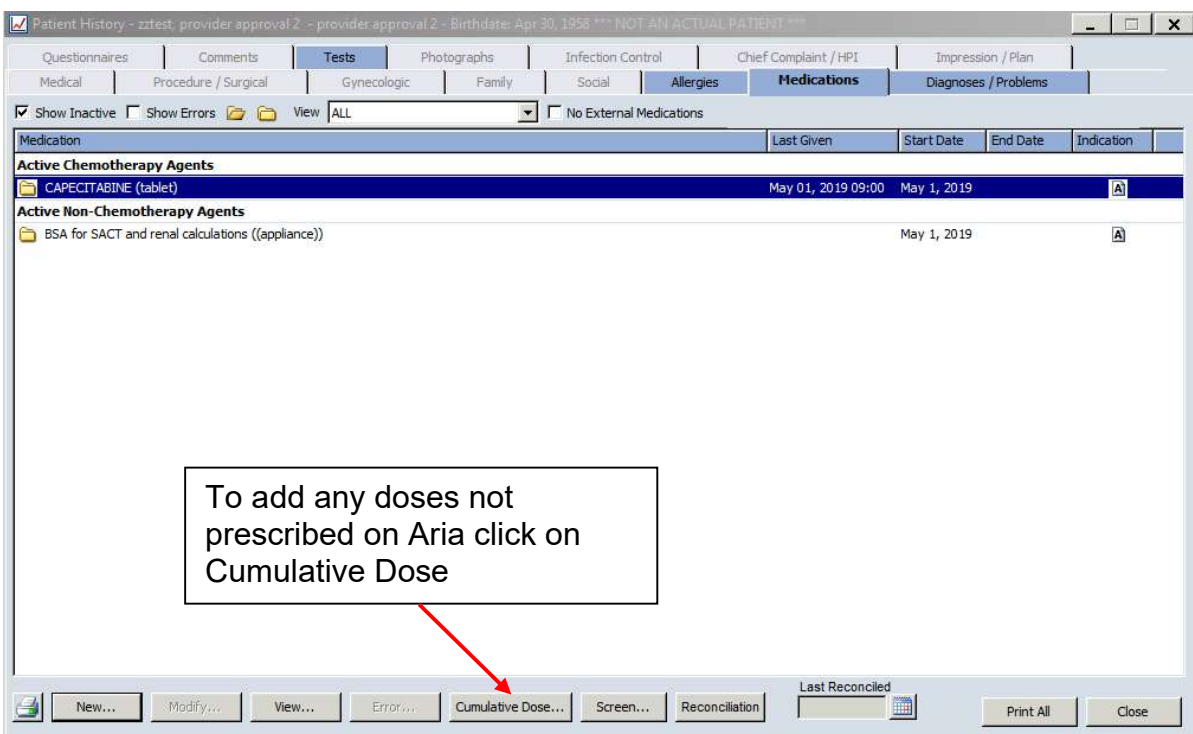

All medication that requires cumulative dose checking prescribed on Aria will automatically be included in the cumulative doses checking and does not need to be added.

To add any agents which require cumulative dose checking, which have been administered to the patient previously but were not prescribed on Aria.
Open patient

Click on History.

Click on Medications. (Any tab that contains information is darker blue).

To add any doses not prescribed on Aria click on Cumulative Dose

Calculate equivalent cumulative dose if another agent eg anthracycline administered previously.

Cumulative Dose - EPIRUBICIN HYDROCHLORIDE (injection)

Prior Cumulative Dose: 75 mg

Cumulative Dose to Date: 0 mg

Total Cumulative Dose: 0 mg

OK Cancel

Add equivalent prior cumulative dose in mg or mg/m². Click OK

Aria will keep track of the cumulative doses each time the agent is administered, and alert when the maximum cumulative dose for the agent is reached.

Cumulative Dose - EPIRUBICIN HYDROCHLORIDE (injection)

Prior Cumulative Dose: 75 mg

Cumulative Dose to Date: 120 mg

Total Cumulative Dose: 195 mg

OK Cancel
